No need to look any further The hameln group is the one address you need to know if you require well experienced professionals for pharmaceutical products. We manufacture and market injectables and we have specialised in what others may find a bit difficult: challenging products like flammable liquids, controlled drugs, highly purified water and more. In many international markets our generics, predominantly analgesics and anaesthetics are used in hospitals and are appreciated for their quality. In the field of pharmaceutical products and manufacture we offer the services that cover all possible customers' needs – including yours. Save time and talk to us!

We have specialised in the production of injectable solutions and suspensions. Our strength lies in the manufacture of highly demanding formulas including flammable liquids, cold chain drugs as well as controlled drugs, all in glass. But, of course, we can handle other active ingredients! If you also need 'ready-to-use' dossiers, no problem, we have a selection that you may want to take a look at.

We have many well-known international pharmaceutical companies amongst our customers and are proud that they are more than satisfied with our service. We can offer you a full service and guarantee documentation and safety according to the highest international standards.

Contract Manufacturing People tend to believe their own eyes more than other peoples' words. That's why we don't want to explain things that you can find out for yourself. You would find that our experience as a contract manufacturer goes back for more than 25 years and we constantly strive to become better.

LIST OF PRODUCTS

General Anaesthetics

- Alfentanil solution for injection
- Fentanyl solution for injection
- Ketamine solution for injection
- Sufentanil solution for injection

Opioid Analgesics

- Morphine solution for injection and infusion
- Pethidine solution for injection
- Tramadol solution for injection

Non-opioids & nsaiDs

- Diclofenac solution for injection

Preoperative medication and sedation

- Midazolam solution for injection

Specific Antidotes

- Flumazenil solution for injection
- Naloxone solution for injection
- Pentetate calcium trisodium injection (Ca-DTPA)
- Pentetate zinc trisodium injection (Zn-DTPA)

Muscle Relaxants

- Atracurium solution for injection
- Pancuronium solution for injection

Cholinesterase Inhibitors

- Neostigmine solution for injection

Cardiovascular medicines

- Dobutamine solution for injection
- Glyceryl Trinitrate solution for infusion

Adrenal hormones and synthetic substitutes

- Dexamethasone solution for injection

Antibacterials

- Clindamycin solution for injection
- Gentamycin solution for injection
- Vancomycin powder for infusion

Antineoplastics

- Calcium Folate solution for injection
- Doxorubicin solution for injection
- Fluorouracil solution for injection
- Methotrexate solution for injection

Antiemetics

- Metoclopramide solution for injection

Psychotherapeutics

- Fluphenazine Decanoate solution for injection

Virustatics

- Aciclovir Powder for Injection

We have been constantly expanding our generic business by developing products, generating marketing authorisations and marketing them in more than 40 countries. And there is more to come. We can offer a wide range of injectable products and the corresponding expertise. Our parenterals supplied in ampoules and vials are of the highest quality level.

Our products are marketed by our sales partners who are experts in their local markets. Mutual respect and close co-operation are the basis of our business relationships.

Generics Are you looking for highly ethical parenterals predominantly used in hospitals, especially anaesthetics and analgesics? You have found them. We specialise in pharmaceutical products for acute treatment. That's our core business.

Good Manufacturing Practice (c-GMP) is our belief and we live up to it every single day. People like what they see here in Hameln, that's why they keep coming back to us – customers and all the relevant international authorities like the US-American FDA. Call it approval, call it certificate, we consistently receive a lot of positive feedback after their visits at our site.

We offer our partners the monitoring and updating of their products in all aspects of pharmaceutical quality – from starting materials to manufacture, logistics to final transfer to the market. Maximum safety without compromise.

Our standards are always in line with the level set by European c-GMP guidelines and conventions. All our processes are explicitly documented in the standard operation procedures (SOP's) of our GMP manual. Nothing is left to chance here.

Quality is something that we strive for every day. It is a process of continuous improvement and you can always become better. Only what's best for the products is best for our customers. When it comes to quality we always aim to exceed expectations. Our quality has been certified by customers and authorities throughout the world many times.

Safety is just a word for some people. For us it is our most important goal and the result of many different steps. Just to name some: visual and pinhole inspections, in process control, environmental monitoring, clear identification of container, content and packaging material by bar coding and ring coding, maintenance of the documentation, change control, pharmacovigilance.

Behind these and all the other processes that guarantee maximum quality for all our products is an entire concept. This concept includes the whole development process, manufacturing procedures and lifecycle maintenance of our products: formulation, stability studies, analysis of incoming materials, analysis of bulk and the finished product, check of all documents, delivery of the product and ongoing maintenance activities. From A to Z.

Packaging

We are convinced that well designed packaging and labelling can reduce the incidence of medical errors. Medical professionals have to choose the right product without doubt – first time, every time. Our packaging design offers easy and quick orientation, clear information without redundancies. It is simple, straightforward and designed with safety in mind.

- Marketing Authorisations and Maintenance
- Dossiers and Documentation
- Stability Studies
- Product Development
- Product Establishment
- Validation
- Risk Analysis
- Manufacturing
- Identifying Raw Material Sources
- Quality Control
- Storage and Distribution
- Periodical Safety Update Reports (PSUR)

Services

Pharmaceutical products require a lot of work and preparations at every step. So why not let us do the work for you? We can offer you a full service. Just choose what you need and contact us. The rest is our job!

Some 320 people take on the challenge of striving for top products and best services every single day of the year. On the basis of a clear corporate identity we follow common targets we have all agreed upon. This provides us with a strong foundation and a recognizable face at the same time. In the middle of all our activities are our customers. We are ambitious.

Corporate After more than 50 years the hameln group is still a family run business and will continue to be so. We have seen success and growth, and we have also experienced tough times. Through all these years the Kerstein family always stuck to their principle of remaining an independent company. This provides us with the necessary flexibility to react to the needs of our customers within a short time. This is what many of our customers see in us, themselves being big multinationals.

Future hameln pharmaceuticals has clear targets and we work hard to achieve them step by step. We are convinced that "There is always a better way".

Being a strong **manufacturing** company means that we constantly have to develop our abilities and capacities according to changes in the markets and in technology. Being a growing **generic** company means that we have to expand our product range constantly and work with the adequate partners worldwide. Being a reliable full **service** company for the pharmaceutical industry means to have specialised and well tailored services in store. We know all that and we do what is necessary. Even more – we want to exceed expectations.
