

Contract manufacture – approved by FDA, ANVISA, Saudi Arabia etc.

For more than 25 years we have been gathering expertise as a contract manufacturer. And we may modestly say that we are appreciated as a reliable and always responsible partner – approved by all the relevant international authorities like the US-American FDA, the Brazilian ANVISA and many more.

In our core business as a contract manufacturer we are happy to have many well-known international pharmaceutical companies amongst our customers. We guarantee documentation, reproducibility and safety according to the highest demands. And we maintain marketing authorisations and documentation of production processes at an international level for our customers. Moreover we improve and further develop known drugs and their production.

We have specialised in the production of liquid injectables and suspensions in ampoules from 1 ml to 50 ml and vials from 2 ml to 250 ml nominal filling volume. Our services range from galenical development to final packaging. We develop methods for production and analysis and perform the subsequent validation, and stability studies according to ICH guidelines. Our manufacturing operations are scalable from 5 litre pilot batches to 3,500 litre marketing batches either aseptically filled or terminally sterilised.
